DETAILED ACTION

Allowable Subject Matter

Claims 1-16 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or suggest a vibration reduction zoom lens system having a + - + - + configuration where all the distances between adjacent groups are moved during zooming, the third lens group has a plurality of lenses including a cemented lens, only the cemented lens is shifted perpendicularly to the optical axis for correcting image shake as well as satisfying the recited numerical condition $f3A/f3$.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hamano (US 6,392,816) and Hamano (US 6,763,186) are both cited to show other zoom lens systems having a + - + - + configuration as well as having a third lens group that moves perpendicularly to the optical axis for reducing

image shake (image stabilization), but not all of the lens groups move for zooming, more than the cemented lens moves perpendicularly for reducing image shake and the numerical condition is not taught or suggested.
